Liz Property Manager — Manual Testing Guide

Version: 1.0 **Last Updated:** April 8, 2026 **App URL:** https://web-lovat-sigma-36.vercel.app **Phase:** Phase 1 — MVP Complete

---

Before You Start

Welcome! This guide walks you through testing every feature in the Liz property management app. You don't need any technical experience — just follow the steps and note what you see.

What You Need

1. **A computer** with a web browser (Chrome recommended)
2. **Two browser windows** — one for testing as a **landlord**, one for testing as a **tenant** (use an incognito/private window for the second account)
3. **A phone or tablet** (optional) — for testing the mobile experience
4. **About 2.5 hours** — you don't have to do it all at once!

How to Open the App

1. Open your browser (Chrome, Firefox, or Safari)
2. Go to: **https://web-lovat-sigma-36.vercel.app**
3. You should see the Liz landing page or sign-in page

How to Report a Bug

When something doesn't work right:

1. **Note the test case number** (e.g., TEST-042)
2. **Take a screenshot** (press `Cmd+Shift+4` on Mac or `Win+Shift+S` on Windows)
3. **Write down:** what you did, what happened, and what should have happened
4. Add it to the **Bugs Found** table at the bottom of this document

Test Accounts

Role	Email	Password	Notes

Role	Email	Password	Notes
Landlord	_(ask your team lead)_	_(ask your team lead)_	Main test account — manages properties
Tenant	_(ask your team lead)_	_(ask your team lead)_	Must be linked to a property

---

Progress Tracker

Check off each section as you complete it:

☐ Section 1: Sign Up & Sign In (TEST-001 to TEST-013)
☐ Section 2: Role-Based Access (TEST-014 to TEST-024)
☐ Section 3: Onboarding Wizard (TEST-025 to TEST-038)
☐ Section 4: Landlord Dashboard (TEST-039 to TEST-066)
☐ Section 5: Properties Management (TEST-067 to TEST-101)
☐ Section 6: Vendors Management (TEST-102 to TEST-120)
☐ Section 7: Maintenance Requests — Landlord (TEST-121 to TEST-152)
☐ Section 8: Tenant Submit Flow (TEST-153 to TEST-171)
☐ Section 9: Tenant My Requests (TEST-172 to TEST-185)
☐ Section 10: Settings (TEST-186 to TEST-201)
☐ Section 11: Navigation & Layout (TEST-202 to TEST-220)
☐ Section 12: Edge Cases & Error Handling (TEST-221 to TEST-252)
☐ Section 13: Cross-Browser & Accessibility (TEST-253 to TEST-265)

Section 1: Sign Up & Sign In

TEST-001: New landlord registration

What we're testing: A brand-new user can create a landlord account **Steps:**

1. Open the app in your browser: https://web-lovat-sigma-36.vercel.app/sign-up
2. You should see a sign-up form
3. Type in a new email address (one you haven't used before)
4. Create a strong password (at least 8 characters, with a number and symbol)
5. Click the "Sign Up" or "Continue" button
6. Check your email for a verification code

7. Enter the verification code when prompted

You should see: After verifying your email, you should be taken to the onboarding wizard page (a "Welcome to Liz!" screen) or the main dashboard **If something's wrong:** The sign-up form doesn't appear, you get a blank page, or you never receive the verification email

---

TEST-002: New tenant registration

What we're testing: A tenant can create an account **Steps:**

1. Open a new incognito/private browser window
2. Go to: https://web-lovat-sigma-36.vercel.app/sign-up
3. Type in a different email address than the landlord account
4. Create a password and click "Sign Up"
5. Verify your email when prompted

You should see: After sign-up, you should land on the tenant submission page (`/submit`) or be asked to set up your profile **If something's wrong:** You end up on the landlord dashboard instead of the tenant page, or the sign-up fails silently

---

TEST-003: Sign-up form won't submit when empty

What we're testing: The form catches missing information **Steps:**

1. Go to the sign-up page
2. Don't type anything in any field
3. Click the "Sign Up" button

You should see: Red error messages appear under the empty fields telling you what's required **If something's wrong:** The form submits anyway, or you see a confusing error page

---

TEST-004: Can't sign up with an email already in use

What we're testing: Duplicate accounts are prevented **Steps:**

1. Go to the sign-up page
2. Type in the same email you used for the landlord account
3. Fill in a password and click "Sign Up"

You should see: An error message like "This email is already registered" or "Account already exists" **If something's wrong:** A second account is created, or you see a generic error with no explanation

---

TEST-005: Weak password is rejected

What we're testing: The app requires a strong password **Steps:**

1. Go to the sign-up page
2. Type in a new email
3. Type a very short password like "123"
4. Click "Sign Up"

You should see: An error message about password requirements (too short, needs special characters, etc.) **If something's wrong:** The weak password is accepted

---

TEST-006: Landlord can sign in

What we're testing: An existing landlord can log back in **Steps:**

1. Go to: https://web-lovat-sigma-36.vercel.app/sign-in
2. Type your landlord email address
3. Type your password
4. Click "Sign In"

You should see: You're taken to the main dashboard page. You should see a sidebar on the left with links like "Dashboard", "Requests", "Properties", "Vendors", and "Settings" **If something's wrong:** You stay on the sign-in page, see an error, or land on the wrong page

---

TEST-007: Tenant can sign in

What we're testing: An existing tenant can log back in **Steps:**

1. Open an incognito/private browser window
2. Go to: https://web-lovat-sigma-36.vercel.app/sign-in
3. Type your tenant email address
4. Type your password
5. Click "Sign In"

You should see: You're taken to the tenant submit page (`/submit`). The navigation should show "Submit" and "My Requests" — NOT the landlord items **If something's wrong:** You see the landlord dashboard, or the page doesn't load

---

TEST-008: Wrong password shows error

What we're testing: The app tells you when your password is wrong **Steps:**

1. Go to the sign-in page
2. Type your real email address
3. Type a wrong password (like "wrongpassword123")
4. Click "Sign In"

You should see: An error message like "Incorrect password" or "Invalid credentials" **If something's wrong:** You get signed in anyway, or the page crashes

---

TEST-009: Non-existent email shows error

What we're testing: The app handles unknown emails gracefully **Steps:**

1. Go to the sign-in page
2. Type an email that doesn't have an account: `nobody-here@example.com`
3. Type any password
4. Click "Sign In"

You should see: An error message like "No account found" or "Invalid credentials" **If something's wrong:** The page hangs or shows a technical error

---

TEST-010: Email stays filled after a failed sign-in

What we're testing: You don't have to retype your email after making a mistake **Steps:**

1. Go to the sign-in page
2. Type your email address
3. Type a wrong password
4. Click "Sign In" and see the error
5. Look at the email field

You should see: Your email address is still in the email field — you only need to fix the password **If something's wrong:** The email field gets cleared and you have to type it again

---

TEST-011: Sign out from landlord account

What we're testing: The sign-out button works **Steps:**

1. Sign in as a landlord
2. Look for your profile picture or initials — usually in the sidebar at the bottom or top-right corner
3. Click on it
4. Click "Sign Out" from the dropdown menu

You should see: You're taken back to the sign-in page. If you try to go to `/dashboard`, you should be redirected to sign-in **If something's wrong:** Nothing happens when you click Sign Out, or you stay signed in

---

TEST-012: Sign out from tenant account

What we're testing: Tenants can sign out too **Steps:**

1. Sign in as a tenant
2. Find and click your profile picture or initials
3. Click "Sign Out"

You should see: You're taken back to the sign-in page **If something's wrong:** The Sign Out option isn't visible, or it doesn't work

---

TEST-013: Sign-in page looks correct

What we're testing: The sign-in page displays properly **Steps:**

1. Go to the sign-in page without being logged in
2. Look at the page layout

You should see: A clean sign-in form with email and password fields, a "Sign In" button, and a link to sign up. The page should look professional, not broken **If something's wrong:** Elements overlap, the form is off-center, or it looks visually broken

---

Section 2: Role-Based Access

TEST-014: Logged-out user can't see the dashboard

What we're testing: You can't sneak into the app without signing in **Steps:**

1. Open an incognito/private browser window (make sure you're not signed in)
2. Type this in the address bar: https://web-lovat-sigma-36.vercel.app/dashboard
3. Press Enter

You should see: You're automatically redirected to the sign-in page **If something's wrong:** You can see the dashboard without signing in

---

TEST-015: Logged-out user can't see properties

What we're testing: Protected pages redirect to sign-in **Steps:**

1. In your incognito window (not signed in), go to: https://web-lovat-sigma-36.vercel.app/properties

You should see: Redirected to the sign-in page **If something's wrong:** The properties page loads without signing in

---

TEST-016: Logged-out user can't see requests

What we're testing: The requests page is protected **Steps:**

1. In your incognito window (not signed in), go to: https://web-lovat-sigma-36.vercel.app/requests

You should see: Redirected to the sign-in page **If something's wrong:** The requests page loads without signing in

---

TEST-017: Logged-out user can't see submit page

What we're testing: Tenant pages are also protected **Steps:**

1. In your incognito window (not signed in), go to: https://web-lovat-sigma-36.vercel.app/submit

You should see: Redirected to the sign-in page **If something's wrong:** The submit form loads without signing in

---

TEST-018: Logged-out user can't see settings

What we're testing: Settings page is protected **Steps:**

1. In your incognito window (not signed in), go to: https://web-lovat-sigma-36.vercel.app/settings

You should see: Redirected to the sign-in page **If something's wrong:** Settings load without signing in

---

TEST-019: Landlord can't visit the tenant submit page

What we're testing: Landlords are kept in their own area **Steps:**

1. Sign in as a landlord
2. Type this in the address bar: https://web-lovat-sigma-36.vercel.app/submit
3. Press Enter

You should see: You're redirected to the dashboard — not the tenant submit page **If something's wrong:** The tenant submit page loads for a landlord

---

TEST-020: Landlord can't visit tenant "My Requests"

What we're testing: Landlords can't see the tenant request list **Steps:**

1. While signed in as a landlord, go to: https://web-lovat-sigma-36.vercel.app/my-requests

You should see: Redirected to the dashboard **If something's wrong:** The tenant "My Requests" page loads for a landlord

---

TEST-021: Tenant can't visit the landlord dashboard

What we're testing: Tenants can't access landlord features **Steps:**

1. Sign in as a tenant

2. Go to: https://web-lovat-sigma-36.vercel.app/dashboard

You should see: Redirected to `/submit` (the tenant's home page) **If something's wrong:** The landlord dashboard loads for a tenant

---

TEST-022: Tenant can't visit properties page

What we're testing: Tenants can't manage properties **Steps:**

1. While signed in as a tenant, go to: https://web-lovat-sigma-36.vercel.app/properties

You should see: Redirected to `/submit` **If something's wrong:** The properties page loads for a tenant

---

TEST-023: Tenant can't visit vendors page

What we're testing: Tenants can't see vendor information **Steps:**

1. While signed in as a tenant, go to: https://web-lovat-sigma-36.vercel.app/vendors

You should see: Redirected to `/submit` **If something's wrong:** The vendors page loads for a tenant

---

TEST-024: Root page redirects based on role

What we're testing: Going to the home page sends you to the right place **Steps:**

1. Sign in as a landlord and go to: https://web-lovat-sigma-36.vercel.app/
2. Note where you land
3. Sign out, then sign in as a tenant and go to the same URL
4. Note where you land

You should see: Landlord lands on `/dashboard`. Tenant lands on `/submit` **If something's wrong:** Both roles go to the same page, or you see an error

---

Section 3: Onboarding Wizard

TEST-025: Wizard loads for new landlord

What we're testing: New landlords see the onboarding setup **Steps:**

1. Sign in as a brand-new landlord (one who hasn't completed onboarding)
2. You should be automatically taken to `/onboarding`

You should see: A "Welcome to Liz!" heading with a multi-step wizard. A progress indicator shows you're on step 1 **If something's wrong:** You go straight to the dashboard, or you see a blank page

---

TEST-026: Step 1 — Risk Appetite options display

What we're testing: The first step shows three AI strategy choices **Steps:**

1. On the onboarding wizard, look at step 1

You should see: Three clickable cards: "Save Money", "Balanced" (marked as recommended), and "Move Fast". Each card has a description explaining what it means **If something's wrong:** Cards don't display, or "Balanced" isn't marked as recommended

---

TEST-027: Step 1 — Can select each option

What we're testing: You can click to choose your preference **Steps:**

1. Click "Save Money" — it should highlight
2. Click "Balanced" — "Save Money" deselects, "Balanced" highlights
3. Click "Move Fast" — same behavior

You should see: Only one card is highlighted at a time, with clear visual feedback (border color, checkmark, etc.) **If something's wrong:** Multiple cards stay selected, or nothing visually changes when you click

---

TEST-028: Step 1 — Next button advances

What we're testing: Clicking Next takes you to step 2 **Steps:**

1. Select any risk appetite option
2. Click the "Next" button

You should see: The wizard advances to step 2 (Delegation Mode). The progress indicator updates **If something's wrong:** Nothing happens, or you get an error

---

TEST-029: Step 2 — Delegation Mode options

What we're testing: Step 2 shows automation choices **Steps:**

1. Advance to step 2

You should see: Three cards: "I approve everything" (Manual), "Auto-approve small jobs" (Assist), and "Full autopilot" (Auto). The "Full autopilot" option should appear grayed out or marked "Coming Soon" **If something's wrong:** All three options are selectable, or the "Coming Soon" label is missing

---

TEST-030: Step 2 — Auto-approve slider appears

What we're testing: Choosing "Auto-approve small jobs" reveals a cost threshold slider **Steps:**

1. On step 2, click "Auto-approve small jobs"
2. Look below the cards

You should see: A slider appears with a dollar amount range ($50 to $500). The default value should be around $150. Dragging the slider changes the amount in real-time **If something's wrong:** No slider appears, or the slider doesn't move

---

TEST-031: Step 2 — Back button preserves selection

What we're testing: Going back doesn't lose your step 1 choice **Steps:**

1. From step 2, click the "Back" button
2. Look at step 1

You should see: Your previous risk appetite selection is still highlighted (whichever card you chose before) **If something's wrong:** Step 1 resets to nothing selected, or shows a different selection

---

TEST-032: Step 3 — Add first property form

What we're testing: Step 3 lets you create your first property **Steps:**

1. Advance to step 3

You should see: A form with fields for Property Name, Address, Unit Count, and Monthly Rent. There should also be a "Skip" option **If something's wrong:** The form doesn't appear, or fields are missing

---

TEST-033: Step 3 — Required fields are validated

What we're testing: You can't save a property without required info **Steps:**

1. On step 3, leave all fields empty
2. Click "Save" or "Finish"

You should see: Error messages appear under the required fields (at least Property Name and Address) **If something's wrong:** The form submits with empty fields

---

TEST-034: Step 3 — Successfully add a property

What we're testing: You can create your first property during onboarding **Steps:**

1. Type a property name: "My First Property"
2. Type an address: "100 Main Street"
3. Set unit count to 2

4. Set monthly rent to 1500
5. Click "Save" or "Finish"

You should see: The wizard completes and you're taken to the main dashboard. Your new property should appear in the dashboard **If something's wrong:** The save fails, or you end up on a blank page

---

TEST-035: Step 3 — Skip property creation

What we're testing: You can skip adding a property **Steps:**

1. On step 3, click "Skip" instead of filling in the form

You should see: The wizard completes and takes you to the dashboard with no properties yet (empty state) **If something's wrong:** The Skip button doesn't work, or it creates a blank property

---

TEST-036: Wizard completion saves settings

What we're testing: Your onboarding choices are saved to your profile **Steps:**

1. Complete the entire wizard with specific choices (e.g., "Save Money" + "Manual")
2. After landing on the dashboard, navigate to `/settings`
3. Check the AI Preferences tab

You should see: Your settings match what you chose during onboarding **If something's wrong:** Settings show defaults instead of your choices

---

TEST-037: Can't re-visit onboarding after completion

What we're testing: Completed onboarding doesn't replay automatically **Steps:**

1. After completing onboarding, type this in the address bar: https://web-lovat-sigma-36.vercel.app/onboarding

You should see: You're redirected to the dashboard (since onboarding is already done) **If something's wrong:** The onboarding wizard starts over again

---

TEST-038: Skip entire onboarding with defaults

What we're testing: The "Use default AI settings" skip option works **Steps:**

1. On step 1 of onboarding, look for a "Use default AI settings" or "Skip" link
2. Click it

You should see: You skip the entire wizard and land on the dashboard. Settings should show balanced + manual defaults **If something's wrong:** The skip link doesn't appear, or it doesn't save defaults

---

Section 4: Landlord Dashboard

TEST-039: Dashboard page loads

What we're testing: The main dashboard displays correctly **Steps:**

1. Sign in as a landlord
2. You should land on `/dashboard` (or navigate there via the sidebar)

You should see: A loading animation briefly, then the dashboard with stat cards, charts, and recent activity. No blank areas or error messages **If something's wrong:** The page is blank, stuck loading forever, or shows an error message

---

TEST-040: Dashboard with no properties (empty state)

What we're testing: The dashboard handles having zero properties gracefully **Steps:**

1. Sign in as a landlord who has no properties
2. Go to `/dashboard`

You should see: A friendly empty state with a message like "Add your first property to get started" and a button to add one. Stats should show zeros **If something's wrong:** The page crashes or shows broken/random numbers

---

TEST-041: Property selector shows all properties

What we're testing: The dropdown at the top lists your properties **Steps:**

1. Sign in as a landlord who has at least 2 properties
2. Look for the property selector/dropdown near the top of the dashboard
3. Click it

You should see: "All Properties" as the default selection, plus each of your properties listed by name **If something's wrong:** The dropdown is empty, or properties are missing

---

TEST-042: Filter dashboard by a specific property

What we're testing: Selecting a property filters the dashboard data **Steps:**

1. Click the property selector dropdown
2. Choose a specific property

You should see: The stat cards, recent requests, and spend chart all update to show data for only that property. Numbers may change **If something's wrong:** Nothing changes, or the dashboard

goes blank

TEST-043: Return to "All Properties" view

What we're testing: You can go back to the overview **Steps:**

1. While filtered to a specific property, click the dropdown
2. Select "All Properties"

You should see: The dashboard returns to showing combined data for all properties **If something's wrong:** The filter gets stuck and you can't go back to the overview

---

TEST-044: Emergency count stat card

What we're testing: The emergency counter shows the right number **Steps:**

1. On the dashboard, find the stat card that shows emergency issues (usually has a red accent)
2. Note the number shown

You should see: The number of emergency-urgency maintenance requests. It should be styled with red/alert colors. If there are no emergencies, it should show 0 **If something's wrong:** The number is negative, shows "NaN", or doesn't match reality

---

TEST-045: Open requests stat card

What we're testing: The open requests counter works **Steps:**

1. Find the stat card showing open (active) requests

You should see: The total number of requests that haven't been resolved yet. The number should change when you filter by property **If something's wrong:** The count is wrong or doesn't update when filtering

---

TEST-046: Average resolution time stat card

What we're testing: The average resolution metric displays correctly **Steps:**

1. Find the stat card showing average resolution time (in days)

You should see: A number like "3.5 days" or "N/A" if no requests have been resolved yet. It should be a reasonable number (not negative or absurdly large) **If something's wrong:** Shows a negative number, "NaN", or unreasonably large value

---

TEST-047: Monthly spend stat card

What we're testing: The spending total displays correctly **Steps:**

1. Find the stat card showing this month's spending

You should see: A dollar amount formatted like "$1,250" or "$0" if nothing has been spent. Should update when filtering by property **If something's wrong:** Shows weird formatting, negative amounts, or "undefined"

TEST-048: Emergency alert banner appears

What we're testing: A warning banner shows when there are emergencies **Steps:**

1. Make sure at least one maintenance request has "emergency" urgency
2. Look at the top of the dashboard

You should see: A red or orange alert banner showing the number of emergency issues, possibly with a link to view them **If something's wrong:** There are emergencies but no banner, or the banner shows for non-emergencies

---

TEST-049: Emergency banner hidden when none exist

What we're testing: The banner disappears when there are no emergencies **Steps:**

1. If possible, make sure no emergency requests exist (or resolve them all)
2. Refresh the dashboard

You should see: No emergency banner at the top **If something's wrong:** A banner shows "0 emergencies" instead of disappearing

---

TEST-050: Onboarding banner for new users

What we're testing: New landlords see a setup prompt **Steps:**

1. Sign in as a landlord who hasn't completed onboarding

You should see: A banner or card prompting you to complete onboarding, with a button that takes you to `/onboarding` **If something's wrong:** No onboarding prompt appears for new users

---

TEST-051: Onboarding banner hidden after completion

What we're testing: The prompt goes away after onboarding **Steps:**

1. Complete onboarding, then return to the dashboard

You should see: No onboarding banner **If something's wrong:** The onboarding banner still shows after completing setup

---

TEST-052: Late payment banner

What we're testing: A warning shows when rent is overdue **Steps:**

1. If any tenant has overdue rent, check the dashboard

You should see: A banner indicating overdue payments with the number of affected properties **If something's wrong:** Overdue rent exists but no banner shows, or the banner shows when no rent is overdue

---

TEST-053: Spend chart displays

What we're testing: The spending chart renders correctly **Steps:**

1. Look for the spending chart area on the dashboard (usually a bar or line chart)

You should see: A chart showing monthly spending trends. The x-axis shows months, the y-axis shows dollar amounts **If something's wrong:** The chart area is blank, shows an error, or displays garbled data

---

TEST-054: Spend chart with no data

What we're testing: The chart handles zero spending gracefully **Steps:**

1. If no spending has been recorded, look at the chart area

You should see: An empty chart with zero line, or a message like "No spending data yet" **If something's wrong:** The chart crashes or shows random data

---

TEST-055: Spend chart filters with property

What we're testing: The chart updates when you select a property **Steps:**

1. Select a specific property from the property selector
2. Look at the spend chart

You should see: The chart updates to show only that property's spending. Select "All Properties" to see the aggregate again **If something's wrong:** The chart doesn't change when filtering

---

TEST-056: Recent requests list shows items

What we're testing: The dashboard shows your most recent maintenance requests **Steps:**

1. Look for the "Recent Requests" section on the dashboard

You should see: Up to 3 recent maintenance requests, each showing an urgency badge (colored), category, a preview of the tenant's message, and the date **If something's wrong:** The list is empty when requests exist, or it shows more than expected

---

TEST-057: Recent requests — empty state

What we're testing: The section handles no requests gracefully **Steps:**

1. If no maintenance requests exist, look at the Recent Requests section

You should see: A message like "No requests yet" — no broken layout or error **If something's wrong:** Blank space, loading spinner that never stops, or an error

---

TEST-058: Recent request urgency badges

What we're testing: Color coding matches urgency **Steps:**

1. Look at the urgency badges on recent requests

You should see: Emergency = red badge, Medium = yellow/orange badge, Low = green badge **If something's wrong:** All badges are the same color, or colors don't match urgency

---

TEST-059: Click a recent request to see details

What we're testing: Requests are clickable and link to their detail page **Steps:**

1. Click on any request in the Recent Requests list

You should see: You're taken to the request detail page (`/requests/{id}`) with full information about that request **If something's wrong:** Nothing happens when you click, or you go to the wrong page

---

TEST-060: Property drill-down appears when property selected

What we're testing: Selecting a property shows its details **Steps:**

1. Select a specific property from the property selector
2. Look for a drill-down section that appears

You should see: Tabs or sections for Documents, Photos, and Utilities for that specific property **If something's wrong:** No drill-down appears, or it shows wrong data

---

TEST-061: Property drill-down — Documents tab

What we're testing: You can view documents for a property **Steps:**

1. In the property drill-down, click the "Documents" tab

You should see: A list of documents uploaded for that property, or a "No documents" message if none exist **If something's wrong:** Tab doesn't load, or shows documents from a different property

---

TEST-062: Property drill-down — Photos tab

What we're testing: You can view photos for a property **Steps:**

1. Click the "Photos" tab in the drill-down

You should see: Photo thumbnails associated with the property/requests, or "No photos" if none exist **If something's wrong:** Photos don't load, or show incorrect images

---

TEST-063: Property drill-down — Utilities tab

What we're testing: You can view utility providers **Steps:**

1. Click the "Utilities" tab in the drill-down

You should see: Utility providers configured for the property (water, electric, gas, etc.), or a "No utilities configured" message **If something's wrong:** Tab shows error or data from wrong property

---

TEST-064: Dashboard desktop layout

What we're testing: The dashboard looks right on a computer screen **Steps:**

1. Open the dashboard on a regular-sized browser window (at least 1024px wide)

You should see: Stats cards in a row, sidebar on the left, chart and requests neatly arranged. Everything fits without scrolling sideways **If something's wrong:** Elements overlap, content spills off-screen, or the layout looks jumbled

---

TEST-065: Dashboard tablet layout

What we're testing: The dashboard adapts to tablet screens **Steps:**

1. Resize your browser window to about 800px wide (or test on a tablet)

You should see: Stats cards rearrange to 2 columns. Content still readable. No sideways scrolling **If something's wrong:** Layout breaks, text gets cut off, or you can scroll sideways

---

TEST-066: Dashboard mobile layout

What we're testing: The dashboard works on phones **Steps:**

1. Resize your browser to about 375px wide (or open on your phone)

You should see: Stats cards stack vertically (one per row). Bottom navigation bar appears. Sidebar is hidden. Everything is readable and scrollable **If something's wrong:** Content overlaps, text is tiny, or you need to scroll sideways

---

Section 5: Properties Management

TEST-067: Properties page loads

What we're testing: The properties list page works **Steps:**

1. Click "Properties" in the sidebar (or go to `/properties`)

You should see: A list of your properties as cards, or an empty state if you haven't added any **If something's wrong:** Blank page, error message, or infinite loading

---

TEST-068: Properties empty state

What we're testing: The page is helpful when you have no properties **Steps:**

1. As a landlord with zero properties, go to `/properties`

You should see: A "No properties yet" message with a prominent "Add Property" button **If something's wrong:** A blank page or confusing error

---

TEST-069: Properties list displays correctly

What we're testing: Property cards show the right info **Steps:**

1. With at least one property, look at the property cards

You should see: Each card shows: property name, address, unit count, and monthly rent amount **If something's wrong:** Missing information or incorrect values

---

TEST-070: Open "Add Property" form

What we're testing: The add form slides open **Steps:**

1. Click the "Add Property" button

You should see: A form slides in from the right side with fields for: Property Name, Address, Apt/Unit Number, Unit Count, and Monthly Rent **If something's wrong:** Nothing happens, or the form appears broken

---

TEST-071: Add Property — empty form validation

What we're testing: Required fields are enforced **Steps:**

1. Open the "Add Property" form
2. Don't fill in anything
3. Click "Save Property"

You should see: Error messages under required fields (at least Property Name and Address are required) **If something's wrong:** The empty form saves successfully

---

TEST-072: Add Property — invalid unit count

What we're testing: You can't enter zero or negative units **Steps:**

1. In the add property form, type 0 for Unit Count
2. Try to save

You should see: An error message (minimum 1 unit) **If something's wrong:** A property with 0 units is created

---

TEST-073: Add Property — negative rent rejected

What we're testing: Rent can't be negative **Steps:**

1. In the add property form, type -500 for Monthly Rent
2. Try to save

You should see: An error message about invalid rent amount **If something's wrong:** A property with negative rent is saved

---

TEST-074: Add Property — successful creation

What we're testing: You can add a new property **Steps:**

1. Click "Add Property"
2. Type Property Name: "Oak Manor"
3. Type Address: "123 Oak Street"
4. Set Unit Count to 4
5. Set Monthly Rent to 1200
6. Click "Save Property"

You should see: The form closes. A success message appears (like "Property created!"). The new property card appears in the list. You may see a prompt to auto-detect utilities **If something's wrong:** The form doesn't close, no success message, or the property doesn't appear

---

TEST-075: Cancel property creation

What we're testing: Closing the form without saving doesn't create anything **Steps:**

1. Click "Add Property"
2. Fill in some fields
3. Click "Cancel" or the X button to close the form

You should see: The form closes without saving. No new property appears **If something's wrong:** A partial property gets created

---

TEST-076: Open edit form for a property

What we're testing: You can edit an existing property **Steps:**

1. Find an existing property card
2. Click the "Edit" button on that card

You should see: The form slides open with all fields filled in with the current property data **If something's wrong:** The form opens empty, or shows wrong data

---

TEST-077: Edit form shows correct current data

What we're testing: Pre-filled values match what you saved **Steps:**

1. Open the edit form for a property you know the details of
2. Check each field

You should see: Property Name, Address, Unit Count, and Monthly Rent all match the existing values **If something's wrong:** Any field shows incorrect data

---

TEST-078: Successfully edit a property

What we're testing: Changes are saved **Steps:**

1. Open the edit form for a property
2. Change the name to "Oak Manor Updated"
3. Click "Save Property"

You should see: The form closes. A success message appears. The property card now shows "Oak Manor Updated" **If something's wrong:** The old name still shows, or you get an error

---

TEST-079: Edit with address change triggers utility re-detect

What we're testing: Changing address prompts utility update **Steps:**

1. Edit a property and change its address to a new one
2. Save the property

You should see: A prompt asking if you want to re-detect utilities for the new address. Previously confirmed utility entries should be preserved **If something's wrong:** No re-detect prompt appears, or confirmed utilities get overwritten

---

TEST-080: Delete property — confirmation dialog

What we're testing: You can't accidentally delete a property **Steps:**

1. Click "Delete" on a property card

You should see: A confirmation dialog asking "Are you sure?" with the property name. Two buttons: "Cancel" and "Delete" (or "Confirm") **If something's wrong:** The property gets deleted immediately without asking

---

TEST-081: Cancel delete

What we're testing: Canceling keeps the property **Steps:**

1. Click "Delete" on a property
2. In the confirmation dialog, click "Cancel"

You should see: The dialog closes. The property is still there **If something's wrong:** The property gets deleted anyway

---

TEST-082: Confirm delete

What we're testing: Confirming actually removes the property **Steps:**

1. Click "Delete" on a property you want to remove
2. Click "Confirm" or "Delete" in the dialog

You should see: The property disappears from the list. A success message confirms deletion. Any tenants under that property are also removed **If something's wrong:** The property stays, or you get an error

---

TEST-083: View tenants under a property

What we're testing: Each property shows its tenants **Steps:**

1. Find a property that has tenants
2. Expand or click into the property to see the tenant list

You should see: Each tenant shows: name, email, phone, unit number, and a lease status badge (green = Active, yellow = Expiring Soon, red = Expired) **If something's wrong:** Tenant list doesn't appear, or information is missing

---

TEST-084: Open "Add Tenant" form

What we're testing: You can add tenants to a property **Steps:**

1. Within a property, click "Add Tenant"

You should see: A form with fields for: Name, Email, Phone, Unit Number, Move-in Date, Lease Type, Lease Start, Lease End, and Rent Due Day **If something's wrong:** Form doesn't open, or fields are missing

---

TEST-085: Add Tenant — required field validation

What we're testing: Name and email are required **Steps:**

1. Open the Add Tenant form
2. Leave Name empty, click Save
3. Leave Email empty, click Save
4. Type "not-an-email" in the email field, click Save

You should see: Error messages for each: name required, email required, invalid email format **If something's wrong:** The form saves without name or with an invalid email

---

TEST-086: Add Tenant — successful creation

What we're testing: You can add a tenant to a property **Steps:**

1. Fill in: Name = "Jane Doe", Email = "jane@test.com", Phone = "555-1234", Unit = "2A"
2. Set Lease Type to "Yearly", Start = today, End = 1 year from today
3. Click "Save Tenant"

You should see: The form closes. The new tenant appears under the property with an "Active" green badge **If something's wrong:** Save fails, or tenant doesn't appear

---

TEST-087: Add Tenant — with custom fields

What we're testing: You can add extra information to tenants **Steps:**

1. Open the Add Tenant form
2. Fill in required fields
3. Add a custom field: Key = "Parking Spot", Value = "P12"
4. Add another: Key = "Pet", Value = "Cat"
5. Save

You should see: Tenant created with a note showing custom fields count (like "2 custom fields") **If something's wrong:** Custom fields aren't saved, or the count is wrong

---

TEST-088: Edit a tenant

What we're testing: You can update tenant information **Steps:**

1. Click "Edit" on an existing tenant
2. Change the name and phone number
3. Click Save

You should see: The form closes. Updated name and phone appear on the tenant card **If something's wrong:** Old data still shows, or the update fails

---

TEST-089: Delete a tenant

What we're testing: You can remove a tenant **Steps:**

1. Click "Delete" on a tenant
2. Confirm in the dialog

You should see: The tenant is removed from the property's list **If something's wrong:** The tenant stays, or you see an error

---

TEST-090: Lease status badge — Active

What we're testing: Active leases show a green badge **Steps:**

1. Add or find a tenant with a lease end date more than 60 days in the future

You should see: A green "Active" badge on their card **If something's wrong:** Wrong color or missing badge

---

TEST-091: Lease status badge — Expiring Soon

What we're testing: Soon-to-expire leases show a yellow badge **Steps:**

1. Add or edit a tenant with a lease end date less than 60 days from today

You should see: A yellow "Expiring Soon" badge **If something's wrong:** Still shows green "Active" or wrong badge

---

TEST-092: Lease status badge — Expired

What we're testing: Expired leases show a red badge **Steps:**

1. Find or create a tenant whose lease end date is in the past

You should see: A red "Expired" badge **If something's wrong:** Shows green or yellow instead

---

TEST-093: Open document section

What we're testing: You can view documents for a property **Steps:**

1. Within a property, find the Documents section or button

You should see: A document gallery or upload area **If something's wrong:** The section doesn't appear or shows an error

---

TEST-094: Upload a document

What we're testing: You can attach files to a property **Steps:**

1. Click the upload button or drag a file into the upload area
2. Select a document type (like "Lease Agreement")
3. Optionally assign it to a specific tenant
4. Click Upload

You should see: The document appears in the gallery showing file name, type, and upload date **If something's wrong:** Upload fails, file doesn't appear, or you see an error

---

TEST-095: View/download a document

What we're testing: Uploaded documents can be opened **Steps:**

1. Click on a document in the gallery

You should see: The document opens in a preview (for images/PDFs) or downloads to your computer **If something's wrong:** Nothing happens, or you get a "file not found" error

---

TEST-096: Delete a document

What we're testing: You can remove uploaded documents **Steps:**

1. Click the delete button on a document
2. Confirm the deletion

You should see: The document disappears from the gallery **If something's wrong:** The document stays, or you get an error

---

TEST-097: Upload document without tenant assignment

What we're testing: Documents can be property-level (not tied to a specific tenant) **Steps:**

1. Upload a document without selecting a specific tenant

You should see: The document appears under the property generally, not under a specific tenant **If something's wrong:** You're forced to select a tenant, or the upload fails

---

TEST-098: Open utility setup

What we're testing: You can manage utility providers for a property **Steps:**

1. Within a property, click the "Utilities" button or tab

You should see: A utility setup panel with categories like Water, Electric, Gas, Internet **If something's wrong:** The panel doesn't open or shows an error

---

TEST-099: Auto-detect utilities

What we're testing: The AI can suggest utility providers based on the address **Steps:**

1. In the utility setup, click "Auto-Detect" or a similar button

You should see: A loading indicator, then utility providers fill in for each category based on the property's address **If something's wrong:** Nothing happens, or you get an error during detection

---

TEST-100: Manual utility entry

What we're testing: You can type in providers yourself **Steps:**

1. For any utility category, manually type a provider name
2. Save

You should see: Your typed provider is saved for that category **If something's wrong:** Manual entries aren't saved

---

TEST-101: Confirm/N-A utilities persist on re-detect

What we're testing: Confirmed utilities don't get overwritten **Steps:**

1. Mark a utility as "Confirmed"
2. Mark another as "N/A" (not applicable)
3. Click re-detect

You should see: Confirmed and N/A entries stay unchanged. Only unconfirmed entries get updated **If something's wrong:** Your confirmed entries get overwritten by auto-detect

---

Section 6: Vendors Management

TEST-102: Vendors page loads

What we're testing: The vendors page displays correctly **Steps:**

1. Click "Vendors" in the sidebar (or go to `/vendors`)

You should see: A grid of vendor cards, or an empty state if you haven't added any **If something's wrong:** Blank page, error, or infinite loading

---

TEST-103: Vendors empty state

What we're testing: The page is helpful when you have no vendors **Steps:**

1. As a landlord with zero vendors, go to `/vendors`

You should see: A "No vendors yet" message with a prominent "Add Vendor" button **If something's wrong:** Blank page or confusing error

---

TEST-104: Vendor card grid layout

What we're testing: Vendor cards adapt to screen size **Steps:**

1. With several vendors, look at the layout at different window sizes

You should see: Desktop: 3 columns. Tablet: 2 columns. Mobile: 1 column **If something's wrong:** Cards overlap, or the grid doesn't adapt

---

TEST-105: Open "Add Vendor" form

What we're testing: The add vendor form works **Steps:**

1. Click "Add Vendor"

You should see: A form slides in with fields for: Business Name, Phone, Email, Specialty, Priority Rank, Notes, and Custom Fields **If something's wrong:** Form doesn't open, or fields are missing

---

TEST-106: Add Vendor — required fields validated

What we're testing: Business Name is required **Steps:**

1. Leave Business Name empty
2. Click Save

You should see: An error message saying the name is required **If something's wrong:** A vendor is created with no name

---

TEST-107: Add Vendor — successful creation

What we're testing: You can add a new vendor **Steps:**

1. Fill in: Business Name = "FastFix Plumbing", Phone = "555-0001", Email = "info@fastfix.com"
2. Select Specialty = "Plumbing"
3. Select Priority Rank = "1st — Preferred"
4. Add Notes: "Available 24/7 for emergencies"
5. Click Save

You should see: The form closes, a success message appears, and a new vendor card shows in the grid **If something's wrong:** Save fails, or the vendor doesn't appear

---

TEST-108: Vendor card shows all information

What we're testing: Vendor cards display properly **Steps:**

1. Look at the vendor card you just created

You should see: Business name, specialty badge (e.g., "Plumbing"), priority badge (e.g., "1st"), phone number (clickable), email (clickable), notes preview, and custom fields count **If something's wrong:** Information is missing or incorrectly displayed

---

TEST-109: Specialty options list

What we're testing: All vendor specialties are available **Steps:**

1. Open the add/edit vendor form
2. Click the Specialty dropdown

You should see: Options for: Plumbing, Electrical, HVAC, Structural, Pest, Appliance, General **If something's wrong:** Options are missing, or there are duplicate/extra options

---

TEST-110: Priority rank options

What we're testing: Priority ranking works **Steps:**

1. Open the vendor form
2. Click the Priority Rank dropdown

You should see: Options: Unranked, 1st — Preferred, 2nd, 3rd **If something's wrong:** Options are missing or incorrectly labeled

---

TEST-111: Add vendor with custom fields

What we're testing: Extra info can be saved on vendors **Steps:**

1. Open Add Vendor form
2. Fill required fields
3. Click "Add Custom Field"
4. Enter Key = "License #", Value = "PL-12345"
5. Add another: Key = "Insurance", Value = "Covered"
6. Save

You should see: Vendor card shows "2 custom fields" or similar indicator **If something's wrong:** Custom fields aren't saved or displayed

---

TEST-112: Open edit vendor form

What we're testing: You can edit existing vendors **Steps:**

1. Click "Edit" on a vendor card

You should see: The form opens with all current vendor data pre-filled **If something's wrong:** Form opens empty, or shows wrong data

---

TEST-113: Edit form shows correct data

What we're testing: All fields match the existing vendor **Steps:**

1. Open edit form for a vendor you know the details of
2. Check each field: name, phone, email, specialty, priority, notes, custom fields

You should see: Everything matches what was previously saved **If something's wrong:** Any field shows incorrect data

---

TEST-114: Successfully edit a vendor

What we're testing: Changes save properly **Steps:**

1. Change the business name and phone number
2. Click Save

You should see: The form closes, success message appears, and the card shows updated data **If something's wrong:** Old data still shows, or the update fails

---

TEST-115: Delete vendor — confirmation dialog

What we're testing: Deleting requires confirmation **Steps:**

1. Click "Delete" on a vendor card

You should see: A confirmation dialog with the vendor name and Cancel/Delete buttons **If something's wrong:** Vendor deletes immediately without asking

---

TEST-116: Cancel vendor delete

What we're testing: Canceling keeps the vendor **Steps:**

1. Click Delete, then click Cancel in the dialog

You should see: Dialog closes, vendor still visible **If something's wrong:** Vendor gets deleted anyway

---

TEST-117: Confirm vendor delete

What we're testing: Confirming removes the vendor **Steps:**

1. Click Delete, then Confirm

You should see: Vendor card disappears, success message shown **If something's wrong:** Vendor stays, or you get an error

---

TEST-118: Vendors sorted by priority

What we're testing: Preferred vendors appear first **Steps:**

1. Make sure you have vendors with different priority ranks (1st, 2nd, 3rd, Unranked)
2. Look at the order of vendor cards

You should see: 1st (Preferred) vendors at the top, then 2nd, then 3rd, then Unranked at the bottom **If something's wrong:** Vendors appear in random or wrong order

---

TEST-119: Phone number is clickable

What we're testing: You can call a vendor by clicking their phone **Steps:**

1. On a vendor card, click the phone number

You should see: Your device offers to make a phone call (on mobile) or shows a tel: link action **If something's wrong:** Nothing happens when clicking the phone number

---

TEST-120: Email is clickable

What we're testing: You can email a vendor by clicking their email **Steps:**

1. On a vendor card, click the email address

You should see: Your email app opens with the vendor's email pre-filled **If something's wrong:** Nothing happens when clicking the email

---

Section 7: Maintenance Requests (Landlord View)

TEST-121: Requests page loads

What we're testing: The requests list page works **Steps:**

1. Click "Requests" in the sidebar (or go to `/requests`)

You should see: A list of maintenance requests or an empty state message **If something's wrong:** Blank page, error, or infinite loading

---

TEST-122: Requests list — desktop view

What we're testing: Requests display as a table on desktop **Steps:**

1. View `/requests` on a wide screen (1024px+)

You should see: A scrollable table with columns: Urgency, Category, Property, Tenant, Description, Date, Status. Each row is clickable **If something's wrong:** Table doesn't render, columns overlap, or rows aren't clickable

---

TEST-123: Requests list — mobile view

What we're testing: Requests display as cards on mobile **Steps:**

1. View `/requests` on a narrow screen (<768px, or on your phone)

You should see: Request cards stacked vertically, each showing urgency badge, category, tenant name, description preview, and date **If something's wrong:** Table doesn't convert to cards, or cards look broken

---

TEST-124: Tab — All requests

What we're testing: The "All" tab shows everything **Steps:**

1. Click the "All" tab (should be selected by default)

You should see: All maintenance requests regardless of status **If something's wrong:** Some requests are missing

---

TEST-125: Tab — Emergency

What we're testing: The Emergency tab filters correctly **Steps:**

1. Click the "Emergency" tab

You should see: Only requests with emergency urgency (all should have red badges). Count in the tab should match **If something's wrong:** Non-emergency requests appear, or emergency ones are missing

---

TEST-126: Tab — In Progress

What we're testing: The In Progress tab shows active requests **Steps:**

1. Click "In Progress" tab

You should see: Only requests with active statuses (submitted, triaged, approved, dispatched). No resolved or closed requests **If something's wrong:** Resolved requests appear in this tab

---

TEST-127: Tab — Resolved

What we're testing: The Resolved tab shows completed requests **Steps:**

1. Click "Resolved" tab

You should see: Only requests that are resolved or closed. No active requests **If something's wrong:** Active requests appear in this tab

---

TEST-128: Filter by property

What we're testing: You can see requests for one property only **Steps:**

1. Use the property filter dropdown
2. Select a specific property

You should see: Only requests for that property. Select "All Properties" to see everything again **If something's wrong:** Filter doesn't work, or shows wrong results

---

TEST-129: Filter by urgency

What we're testing: You can filter by how urgent requests are **Steps:**

1. Use the urgency filter dropdown
2. Select "Emergency" — only emergency requests show
3. Select "Medium" — only medium requests show
4. Select "Low" — only low requests show
5. Clear the filter — all urgencies show

You should see: The list updates to match your filter selection each time **If something's wrong:** Filtering doesn't change the list

---

TEST-130: Search by tenant name

What we're testing: You can search for requests **Steps:**

1. Type a partial tenant name in the search box

You should see: The list filters to show only requests matching that name **If something's wrong:** Search doesn't filter, or returns wrong results

---

TEST-131: Search by description

What we're testing: Search works on issue descriptions too **Steps:**

1. Type a word from an issue description (like "leak" or "broken")

You should see: Requests with that word in the description appear **If something's wrong:** No results when there should be matches

---

TEST-132: Combined filters

What we're testing: Multiple filters work together **Steps:**

1. Select a property AND a urgency level

You should see: Only requests matching both criteria **If something's wrong:** Filters conflict or one overrides the other

---

TEST-133: Empty filter results

What we're testing: The app handles "no matches" gracefully **Steps:**

1. Apply filters that match no requests

You should see: A "No requests found" message — not a blank page or error **If something's wrong:** Blank list with no explanation, or the page crashes

---

TEST-134: Navigate to request detail

What we're testing: You can view full details of a request **Steps:**

1. Click on any request in the list

You should see: You're taken to `/requests/{id}` with the full request details. A back link is visible to return to the list **If something's wrong:** Nothing happens when clicking, or you go to the wrong request

---

TEST-135: Tenant message on detail page

What we're testing: The tenant's original message is shown **Steps:**

1. On a request detail page, look for the tenant's message

You should see: The full text of what the tenant typed when submitting the issue, along with the tenant's name **If something's wrong:** Message is missing, truncated, or shows wrong text

---

TEST-136: Request photos display

What we're testing: Photos attached to requests are visible **Steps:**

1. Open a request that has photos attached

You should see: Photo thumbnails (up to 3) that you can click to view larger. If no photos: appropriate "No photos" text **If something's wrong:** Photos don't load, show as broken images, or are missing

---

TEST-137: Urgency and status badges on detail page

What we're testing: Badges display correctly on the detail page **Steps:**

1. Check the urgency badge: Emergency = red, Medium = yellow, Low = green
2. Check the status badge: shows current status (submitted, triaged, dispatched, etc.)

You should see: Correct colors and labels matching the request's actual urgency and status **If something's wrong:** Wrong colors or labels

---

TEST-138: AI Classification card

What we're testing: The AI's analysis is shown **Steps:**

1. On the detail page, look for the AI Classification section

You should see: Category (like "Plumbing"), Urgency level (with color), Confidence score (0-100%), and Recommended action text **If something's wrong:** Classification section is missing, or values seem random

---

TEST-139: Cost estimate display

What we're testing: The estimated cost range is shown **Steps:**

1. Look for the cost estimate section on the detail page

You should see: A price range like "$50 — $200" formatted as currency **If something's wrong:** Cost shows as "undefined", negative, or missing entirely

---

TEST-140: Vendor selector displays

What we're testing: You can choose a vendor for the job **Steps:**

1. On the detail page, look for the vendor dropdown

You should see: A list of your vendors. Vendors matching the request's category should appear first (e.g., plumbing vendors for a plumbing issue) **If something's wrong:** Vendor list is empty, or vendors aren't sorted by relevance

---

TEST-141: Auto-match vendor by category

What we're testing: The system suggests relevant vendors first **Steps:**

1. Open a "Plumbing" request — plumbing vendors should appear first in the dropdown
2. Open an "Electrical" request — electrical vendors should appear first

You should see: Category-matching vendors are prioritized in the dropdown **If something's wrong:** All vendors appear in random order

---

TEST-142: Change selected vendor

What we're testing: You can switch to a different vendor **Steps:**

1. Select one vendor from the dropdown
2. Then select a different vendor

You should see: The selection updates immediately to the new vendor **If something's wrong:** Selection doesn't change, or both vendors appear selected

---

TEST-143: Work order draft text

What we're testing: A work order template is pre-filled **Steps:**

1. Look for the work order text area on the detail page

You should see: Pre-filled text with property details, issue description, and tenant information. The text should be editable **If something's wrong:** Work order area is blank, or text isn't editable

---

TEST-144: Edit work order text

What we're testing: You can customize the work order **Steps:**

1. Click into the work order text area
2. Add a note like "Please call tenant before arriving"
3. Click somewhere else on the page

You should see: Your changes stay (the text isn't reset). If you navigate away and come back, changes may or may not persist depending on if auto-save is implemented **If something's wrong:** Text resets immediately after editing

---

TEST-145: Approve & Dispatch — button disabled without vendor

What we're testing: You can't dispatch without selecting a vendor **Steps:**

1. Make sure no vendor is selected
2. Look at the "Approve & Dispatch" button

You should see: The button is grayed out or disabled **If something's wrong:** You can click dispatch without a vendor selected

---

TEST-146: Approve & Dispatch — successful

What we're testing: Dispatching a request works **Steps:**

1. Select a vendor
2. Review/edit the work order text
3. Click "Approve & Dispatch"

You should see: A loading indicator briefly, then a success message. The request status changes to "dispatched". The dispatch date/time is shown. The Approve button becomes disabled **If something's wrong:** Nothing happens, you get an error, or the status doesn't update

---

TEST-147: Already dispatched request

What we're testing: You can't dispatch the same request twice **Steps:**

1. Go to a request that was already dispatched

You should see: The Approve button is disabled. Status shows "dispatched" with the date. Vendor and work order details are still visible **If something's wrong:** The dispatch button is still active

---

TEST-148: Resolve a dispatched request

What we're testing: You can mark a request as resolved **Steps:**

1. Go to a dispatched request
2. Look for a "Resolve" button
3. Click it

You should see: The request status changes to "resolved". The resolve date is shown **If something's wrong:** Resolve fails, or the button isn't available

---

TEST-149: Invalid request ID — 404

What we're testing: Bad URLs are handled gracefully **Steps:**

1. Type a fake URL: https://web-lovat-sigma-36.vercel.app/requests/fake-id-12345

You should see: A "Request not found" message, not a crash. Navigation still works **If something's wrong:** Blank page, crash, or a technical error stack trace

---

TEST-150: Request detail — desktop layout

What we're testing: The detail page looks right on desktop **Steps:**

1. Open a request detail page on a wide screen

You should see: Two-column layout — request details/photos on the left, AI classification/vendor/dispatch on the right **If something's wrong:** Elements overlap or all stack vertically on desktop

---

TEST-151: Request detail — mobile layout

What we're testing: The detail page works on mobile **Steps:**

1. Open a request detail on a phone or narrow window

You should see: Single-column layout with everything stacked. Approve button at the bottom (possibly sticky). Everything readable **If something's wrong:** Content overlaps, text is cut off, or the dispatch button is unreachable

---

TEST-152: Back link returns to list

What we're testing: You can go back to the requests list **Steps:**

1. From a request detail page, click the back link/arrow

You should see: You return to `/requests` with the same filters/tab you had before **If something's wrong:** Back link is missing, or you go to the wrong page

---

Section 8: Tenant Submit Flow

TEST-153: Submit page loads

What we're testing: The tenant submission form works **Steps:**

1. Sign in as a tenant
2. Go to `/submit`

You should see: A form with a text area to describe the issue and an area to upload photos **If something's wrong:** Blank page, error message, or form doesn't appear

---

TEST-154: Tenant profile detected

What we're testing: The system knows which property the tenant belongs to **Steps:**

1. On the submit page, check that there's no error about "property not found"

You should see: The page loads normally — the tenant is linked to their landlord's property **If something's wrong:** An error message about missing property or tenant profile

---

TEST-155: Description field placeholder and validation

What we're testing: The text field provides guidance **Steps:**

1. Look at the text area — it should have placeholder text like "Describe the issue..."
2. Try to submit without typing anything

You should see: The placeholder text disappears when you start typing. Submitting empty shows a validation error **If something's wrong:** No placeholder, or empty form submits successfully

---

TEST-156: Photo uploader works

What we're testing: You can attach photos to your request **Steps:**

1. Look for the photo upload area
2. Click it to select files, or drag a photo into it

You should see: A file selection dialog opens (or drag-and-drop works). After selecting, you see a preview of the photo. You can select multiple files **If something's wrong:** Upload area doesn't respond, or no preview shows

---

TEST-157: Submit with description only (no photos)

What we're testing: You can submit without photos **Steps:**

1. Type a description: "Water is leaking from the kitchen ceiling"
2. Don't add any photos
3. Click "Submit Request"

You should see: A loading indicator, then the request is created. You'll see the gatekeeper response **If something's wrong:** Submission fails, or you're forced to add photos

---

TEST-158: Submit with photos

What we're testing: Photos are included with the request **Steps:**

1. Type a description: "Broken window in bedroom"
2. Add 1-3 photos
3. Click "Submit Request"

You should see: Loading indicator for uploading photos, then for submitting. The request is created with photos attached **If something's wrong:** Photos fail to upload, or the request is created without the photos

---

TEST-159: Submit button state changes

What we're testing: The button prevents double-submission **Steps:**

1. Fill in a description
2. Watch the submit button as you click it

You should see: While idle: "Submit Request". While uploading: "Uploading..." (disabled). While submitting: "Submitting..." (disabled). After success: button disappears or changes **If something's wrong:** Button stays enabled during submission, or text doesn't change

---

TEST-160: Gatekeeper — self-resolvable issue

What we're testing: The AI suggests troubleshooting for minor issues **Steps:**

1. Submit a minor issue like "My garbage disposal isn't working"

You should see: A gatekeeper response with troubleshooting steps (e.g., "Try pressing the reset button on the bottom"). Two buttons: "Issue Resolved" and "Escalate to Landlord" **If something's wrong:** No troubleshooting guide, or it goes straight to the landlord

---

TEST-161: Resolve — tenant self-fixes

What we're testing: The "Issue Resolved" button works **Steps:**

1. After seeing the gatekeeper response, click "Issue Resolved"

You should see: A success screen confirming the issue is resolved. You should be able to submit a new request **If something's wrong:** Nothing happens, or you get an error

---

TEST-162: Escalate — tenant needs help

What we're testing: The "Escalate to Landlord" button works **Steps:**

1. After seeing the gatekeeper response, click "Escalate to Landlord"

You should see: A confirmation like "Request sent to your landlord." You should be able to submit another request **If something's wrong:** Escalation fails, or no confirmation appears

---

TEST-163: Gatekeeper — serious issue (skip troubleshooting)

What we're testing: Dangerous issues go straight to the landlord **Steps:**

1. Submit a serious issue like "I smell gas in my apartment"

You should see: The gatekeeper skips troubleshooting and directly offers to escalate to the landlord. It may show urgent safety instructions **If something's wrong:** You see trivial troubleshooting steps for a gas leak

---

TEST-164: AI Classification runs after submit

What we're testing: The AI categorizes the request **Steps:**

1. Submit a request and note the gatekeeper response
2. Sign in as the landlord and check the request

You should see: The request has AI classification: category (plumbing, electrical, etc.), urgency (low/medium/emergency), and confidence score **If something's wrong:** Request shows without classification, or category seems completely wrong

---

TEST-165: Photo analysis by AI

What we're testing: Photos help the AI classify better **Steps:**

1. As a tenant, submit a request with photos of the issue
2. As the landlord, check the request detail

You should see: Photos visible on the detail page. The AI classification may account for what's visible in the photos **If something's wrong:** Photos aren't shown on landlord's view

---

TEST-166: Upload failure handling

What we're testing: The app handles photo upload errors gracefully **Steps:**

1. Try uploading a very large file (>20MB) or an unsupported format (like .exe)

You should see: An error message explaining the problem. You can remove the bad file and try again. The form still works **If something's wrong:** The page crashes, or the upload silently fails

---

TEST-167: Submit failure handling

What we're testing: The app handles submission errors **Steps:**

1. If the submission API fails (e.g., network issue)

You should see: An error message. Your description text is still in the form (not cleared). You can retry **If something's wrong:** Form data is lost, or no error is shown

---

TEST-168: End-to-end — submit, escalate, landlord views

What we're testing: The complete flow from tenant to landlord **Steps:**

1. **As tenant:** Submit a request with a description and 1 photo
2. **As tenant:** See gatekeeper response, click "Escalate to Landlord"
3. **As tenant:** See success confirmation
4. **As landlord:** Go to `/requests`
5. **As landlord:** Find the new request in the list (it should show urgency badge)
6. **As landlord:** Click to view details at `/requests/{id}`
7. **As landlord:** Verify: tenant message, photo, AI classification, cost estimate are all present
8. **As landlord:** Select a vendor, edit work order, click "Approve & Dispatch"

You should see: Each step works smoothly from tenant submission all the way through landlord dispatch **If something's wrong:** Any step fails, data is missing, or the request doesn't appear for the landlord

---

TEST-169: End-to-end — submit, self-resolve

What we're testing: Tenant resolves their own issue **Steps:**

1. **As tenant:** Submit a minor issue (e.g., "Light bulb burned out in hallway")
2. **As tenant:** See troubleshooting guide, click "Issue Resolved"
3. **As tenant:** See success confirmation
4. **As landlord:** Go to `/requests` > "Resolved" tab
5. **As landlord:** Find the resolved request

You should see: The request shows as resolved in the landlord's request list **If something's wrong:** The resolved request doesn't appear for the landlord

---

TEST-170: Submit another request after completing one

What we're testing: You can submit multiple requests in a session **Steps:**

1. Complete a full submit → gatekeeper → resolve/escalate flow
2. Navigate to `/submit` again

You should see: A fresh, empty form ready for a new submission **If something's wrong:** The old submission data still shows, or the form is disabled

---

TEST-171: Submit page on mobile

What we're testing: The submission form works on phones **Steps:**

1. Open `/submit` on a mobile device or narrow window

You should see: Text area is full-width, photo uploader works, submit button is easily tappable **If something's wrong:** Elements overlap, button is too small, or layout is broken

---

Section 9: Tenant My Requests

TEST-172: My Requests page loads

What we're testing: Tenants can see their submitted requests **Steps:**

1. Sign in as a tenant
2. Go to `/my-requests`

You should see: A list of your previously submitted requests, or an empty state if you haven't submitted any **If something's wrong:** Blank page, error, or infinite loading

---

TEST-173: Empty state with submit link

What we're testing: New tenants get guidance **Steps:**

1. As a tenant with zero requests, go to `/my-requests`

You should see: A "No requests yet" message with a button or link to "Submit a Request" that goes to `/submit` **If something's wrong:** Blank page, or no link to submit

---

TEST-174: Request list shows correctly

What we're testing: Request cards display proper info **Steps:**

1. With submitted requests, look at the cards

You should see: Each card shows: urgency badge, category, description preview, date, and status **If something's wrong:** Missing information or wrong values

---

TEST-175: Tab — All

What we're testing: The "All" tab shows everything **Steps:**

1. Click the "All" tab (should be default)

You should see: All your requests, both active and resolved **If something's wrong:** Some requests are missing

---

TEST-176: Tab — Active

What we're testing: Active tab filters to open requests **Steps:**

1. Click the "Active" tab

You should see: Only requests with non-resolved statuses. No resolved or closed requests **If something's wrong:** Resolved requests appear

---

TEST-177: Tab — Resolved

What we're testing: Resolved tab shows completed requests **Steps:**

1. Click the "Resolved" tab

You should see: Only resolved or closed requests **If something's wrong:** Active requests appear

---

TEST-178: Empty tab state

What we're testing: Empty tabs are handled gracefully **Steps:**

1. Click a tab that has no matching requests

You should see: A "No requests" message with a link to submit a new one **If something's wrong:** Blank space with no explanation

---

TEST-179: Navigate to request detail

What we're testing: You can view your request details **Steps:**

1. Click on any request card

You should see: Full details at `/my-requests/{id}` — your message, photos, urgency badge, status, category **If something's wrong:** Click doesn't work, or wrong request loads

---

TEST-180: Detail page is read-only

What we're testing: Tenants can't dispatch or edit requests **Steps:**

1. On a request detail page as a tenant

You should see: Your message, photos, AI classification info — but NO vendor selector, NO work order editor, NO dispatch button **If something's wrong:** You see landlord-only controls like "Approve & Dispatch"

TEST-181: AI classification visible to tenant

What we're testing: Tenants can see how their issue was categorized **Steps:**

1. On a request detail, look for the classification info

You should see: Category (with icon), urgency badge, status badge, and recommended action text **If something's wrong:** Classification section is missing for tenants

---

TEST-182: Metadata card on detail

What we're testing: Request metadata displays correctly **Steps:**

1. On a request detail, look for metadata like submitted date, property name, and request ID

You should see: All three pieces of information displayed clearly **If something's wrong:** Metadata is missing or shows wrong values

---

TEST-183: Request not found for invalid ID

What we're testing: Bad URLs show a friendly error **Steps:**

1. Go to: https://web-lovat-sigma-36.vercel.app/my-requests/fake-id-99999

You should see: "Request not found" message — not a crash **If something's wrong:** Blank page, crash, or technical error

---

TEST-184: Tenant sees only their own requests

What we're testing: One tenant can't see another's requests **Steps:**

1. Submit 2 requests as Tenant A
2. Sign in as Tenant B (different account)
3. Go to `/my-requests`

You should see: Tenant B sees only their own requests (or empty state), NOT Tenant A's requests **If something's wrong:** Tenant B can see Tenant A's requests

---

TEST-185: Tenant can't access another tenant's request detail

What we're testing: Direct URL to another tenant's request is blocked **Steps:**

1. Copy a request ID from Tenant A's request
2. Sign in as Tenant B
3. Try to access `/my-requests/{tenantA-request-id}`

You should see: "Not found" or an error — NOT Tenant A's request details **If something's wrong:** Tenant B can view Tenant A's private request

---

Section 10: Settings

TEST-186: Settings page loads

What we're testing: The settings page works **Steps:**

1. Click "Settings" in the sidebar (or go to `/settings`)

You should see: A page with two tabs: "AI Preferences" and "Notifications". AI Preferences tab is selected by default **If something's wrong:** Blank page, missing tabs, or error

---

TEST-187: Risk Appetite cards display

What we're testing: AI preference options show correctly **Steps:**

1. On the AI Preferences tab, look at the Risk Appetite section

You should see: Three clickable cards: "Save Money", "Balanced" (marked recommended), "Move Fast". Your current selection is highlighted **If something's wrong:** Cards don't display, or current selection isn't highlighted

---

TEST-188: Change Risk Appetite

What we're testing: You can switch your AI strategy **Steps:**

1. Click "Save Money" — it highlights
2. Click "Move Fast" — "Save Money" deselects, "Move Fast" highlights
3. Notice the "Save Changes" button becomes enabled

You should see: Only one card selected at a time, with the save button becoming active after any change **If something's wrong:** Multiple selections, or save button stays disabled

---

TEST-189: Delegation Mode cards display

What we're testing: Automation level options show correctly **Steps:**

1. Look at the Delegation Mode section

You should see: Three cards: "I approve everything" (Manual), "Auto-approve small jobs" (Assist), "Full autopilot" (Auto — marked as coming soon/grayed out) **If something's wrong:** Missing cards, or "Full autopilot" is selectable when it shouldn't be

---

TEST-190: Auto-approve slider appears for Assist mode

What we're testing: The cost threshold slider shows when needed **Steps:**

1. Click "Auto-approve small jobs"

You should see: A slider appears below with a range of $50 to $500, defaulting to $150. Dragging changes the dollar value in real-time **If something's wrong:** No slider appears, or the slider doesn't move

---

TEST-191: Slider hidden for Manual mode

What we're testing: The slider disappears when not needed **Steps:**

1. Click "I approve everything" (Manual)

You should see: The auto-approve slider disappears **If something's wrong:** Slider stays visible in Manual mode

---

TEST-192: Switch to Notifications tab

What we're testing: The second tab works **Steps:**

1. Click the "Notifications" tab

You should see: Notification settings with toggle switches **If something's wrong:** Tab doesn't switch, or content is blank

---

TEST-193: Emergency alerts toggle

What we're testing: You can control emergency notifications **Steps:**

1. On the Notifications tab, find the "Emergency alerts" toggle
2. Click it to switch on/off

You should see: The toggle switches state. The "Save Changes" button becomes enabled **If something's wrong:** Toggle doesn't respond, or save button stays disabled

---

TEST-194: All request alerts toggle

What we're testing: You can control all-request notifications **Steps:**

1. Find the "All request alerts" toggle
2. Switch it

You should see: Toggle changes state, save button becomes enabled **If something's wrong:** Same as above

---

TEST-195: Save button disabled when nothing changed

What we're testing: The save button knows when there are no changes **Steps:**

1. Load the settings page without changing anything

You should see: "Save Changes" button is grayed out/disabled **If something's wrong:** Save button is enabled with no changes

---

TEST-196: Successfully save settings

What we're testing: Changes are saved **Steps:**

1. Change the Risk Appetite and toggle a notification setting
2. Click "Save Changes"

You should see: Loading indicator briefly, then a success message like "Settings saved!" The save button returns to disabled state **If something's wrong:** Save fails, no success message, or button stays enabled

---

TEST-197: Verify settings persist

What we're testing: Changes survive page navigation **Steps:**

1. Save some settings changes
2. Navigate to `/dashboard`
3. Come back to `/settings`

You should see: All your previously saved settings are still selected correctly **If something's wrong:** Settings reverted to defaults

---

TEST-198: Save from Notifications tab

What we're testing: Both tabs save together **Steps:**

1. Change something on AI Preferences tab
2. Switch to Notifications tab and change a toggle
3. Click "Save Changes"

You should see: Both the AI preference change and notification change are saved **If something's wrong:** Only one tab's changes are saved

---

TEST-199: Re-run onboarding button exists

What we're testing: You can redo the onboarding wizard **Steps:**

1. Look for a "Re-run onboarding" button on the settings page

You should see: A button that lets you restart the onboarding wizard **If something's wrong:** No re-run button exists

---

TEST-200: Re-run onboarding works

What we're testing: Clicking re-run takes you through onboarding again **Steps:**

1. Click "Re-run onboarding"

You should see: You're taken to `/onboarding`. The wizard starts from step 1. You can complete it again **If something's wrong:** Nothing happens, or you get an error

---

TEST-201: Settings after re-run onboarding

What we're testing: Onboarding updates overwrite previous settings **Steps:**

1. Re-run onboarding and choose different options than before
2. Complete the wizard
3. Go to `/settings`

You should see: Settings reflect your new onboarding choices **If something's wrong:** Old settings remain despite choosing new ones in onboarding

---

Section 11: Navigation & Layout

TEST-202: Landlord sidebar renders (desktop)

What we're testing: The sidebar navigation appears on wide screens **Steps:**

1. Sign in as a landlord on a desktop-sized browser (1024px+ wide)

You should see: A left sidebar with the "Liz" brand/logo, plus links for: Dashboard, Requests, Properties, Vendors, Settings. Your profile picture/initials at the bottom **If something's wrong:** Sidebar is missing, or links are incomplete

---

TEST-203: Sidebar active state

What we're testing: The current page is highlighted in the sidebar **Steps:**

1. Navigate to each page by clicking sidebar links
2. Check which link is highlighted after each click

You should see: On `/dashboard`: Dashboard highlighted. On `/requests`: Requests highlighted. And so on for each page **If something's wrong:** Wrong link highlighted, or no highlighting at all

---

TEST-204: Sidebar navigation works

What we're testing: All sidebar links navigate correctly **Steps:**

1. Click Dashboard — goes to `/dashboard`
2. Click Requests — goes to `/requests`
3. Click Properties — goes to `/properties`
4. Click Vendors — goes to `/vendors`
5. Click Settings — goes to `/settings`

You should see: Each click takes you to the right page. Pages load without a full refresh (smooth transition) **If something's wrong:** Links go to wrong pages, or the whole page reloads each time

---

TEST-205: Mobile bottom navigation appears

What we're testing: Phone users get bottom navigation **Steps:**

1. Sign in as a landlord
2. Make your browser window narrow (<1024px) or open on a phone

You should see: A bottom navigation bar with icons for Dashboard, Requests, Properties, Vendors, Settings. The sidebar is hidden **If something's wrong:** Both sidebar and bottom nav show, or neither shows

---

TEST-206: Mobile bottom nav active state

What we're testing: The current page's icon is highlighted on mobile **Steps:**

1. On mobile, tap each nav icon and check if it highlights

You should see: The currently active page's icon is visually distinguished (different color or weight) **If something's wrong:** No active indicator, or wrong icon highlighted

---

TEST-207: Bottom nav doesn't overlap content

What we're testing: You can see everything with the bottom nav **Steps:**

1. On mobile, scroll to the bottom of any page

You should see: All content is visible — the bottom nav doesn't cover the last items on the page. Content scrolls independently of the nav **If something's wrong:** The last card or button is hidden behind the bottom nav

---

TEST-208: Tenant sees tenant navigation only

What we're testing: Tenants don't see landlord menu items **Steps:**

1. Sign in as a tenant
2. Look at the navigation (sidebar or bottom nav)

You should see: Only "Submit" (or "New Request") and "My Requests". NO Dashboard, Properties, Vendors, or Settings links **If something's wrong:** Tenant sees landlord navigation items

---

TEST-209: Tenant mobile navigation

What we're testing: Tenant bottom nav is correct on mobile **Steps:**

1. Sign in as tenant on mobile

You should see: Bottom nav with only tenant items (Submit, My Requests). Tapping navigates correctly **If something's wrong:** Landlord items appear, or navigation doesn't work

---

TEST-210: User button / Sign out

What we're testing: The profile button works **Steps:**

1. Click your profile picture or initials (usually in the sidebar or header)

You should see: A dropdown with options like "Profile" and "Sign Out" **If something's wrong:** Nothing happens when clicking

---

TEST-211: Sign out via user button

What we're testing: Signing out from the profile dropdown **Steps:**

1. Click profile picture, then "Sign Out"

You should see: You're logged out and redirected to `/sign-in` **If something's wrong:** You stay logged in, or get an error

---

TEST-212: Desktop layout (1024px+)

What we're testing: Wide screen layout **Steps:**

1. Use a browser at 1024px or wider

You should see: Sidebar on left, bottom nav hidden, content uses remaining width, multi-column layouts where appropriate **If something's wrong:** Layout is cramped or broken

---

TEST-213: Tablet layout (768px–1023px)

What we're testing: Medium screen layout **Steps:**

1. Resize browser to about 900px wide

You should see: Content adapts — cards may go to 2 columns, sidebar may be hidden, no horizontal scrollbar **If something's wrong:** Horizontal scrollbar appears, or content is unreadable

---

TEST-214: Mobile layout (<768px)

What we're testing: Small screen layout **Steps:**

1. Resize to about 375px or open on phone

You should see: Single-column layout, bottom nav visible, all text readable without zooming, buttons big enough to tap (at least 44px) **If something's wrong:** Text is tiny, buttons are too small, or you need to scroll sideways

---

TEST-215: Very small screen (320px)

What we're testing: Ultra-narrow screens still work **Steps:**

1. Resize browser to 320px wide

You should see: Content is still readable, no overlapping elements, forms still usable, navigation functional **If something's wrong:** Elements overlap, text is cut off, or the app is unusable

---

TEST-216: Loading states between pages

What we're testing: Page transitions feel smooth **Steps:**

1. Navigate between different pages via the sidebar

You should see: A brief loading indicator (skeleton, spinner) before content appears. No flash of unstyled content **If something's wrong:** Content pops in jarringly, or loading never finishes

---

TEST-217: Sheet/form behavior — slide in

What we're testing: Add/edit forms appear correctly **Steps:**

1. Click "Add Property" (or Add Vendor, Add Tenant)

You should see: A panel slides smoothly from the right side of the screen **If something's wrong:** Form appears abruptly, or doesn't appear at all

---

TEST-218: Sheet/form — close by clicking outside

What we're testing: You can dismiss forms by clicking the backdrop **Steps:**

1. Open any form sheet (Add Property, etc.)
2. Click on the dimmed/grayed-out area behind the form

You should see: The form closes **If something's wrong:** Clicking outside doesn't close it

---

TEST-219: Sheet/form — close with Escape key

What we're testing: The Escape key closes forms **Steps:**

1. Open any form sheet
2. Press the Escape key on your keyboard

You should see: The form closes **If something's wrong:** Nothing happens when pressing Escape

---

TEST-220: Sheet/form on mobile

What we're testing: Forms work on small screens **Steps:**

1. On mobile, open any form (Add Property, Add Vendor, etc.)

You should see: The form takes up most of the screen. All fields are usable. You can scroll within the form if it's long **If something's wrong:** Form is too small to use, or extends beyond the screen

---

Section 12: Edge Cases & Error Handling

TEST-221: Dashboard empty — no properties

What we're testing: Dashboard doesn't crash with zero data **Steps:**

1. Sign in as landlord with 0 properties, go to `/dashboard`

You should see: Friendly empty state with guidance to add your first property. Stats show zeros. No crashes **If something's wrong:** Page crashes or shows garbled data

---

TEST-222: Properties page — no properties

What we're testing: Properties page empty state **Steps:**

1. With 0 properties, go to `/properties`

You should see: "No properties yet" message with working "Add Property" button **If something's wrong:** Blank page or error

---

TEST-223: Vendors page — no vendors

What we're testing: Vendors page empty state **Steps:**

1. With 0 vendors, go to `/vendors`

You should see: "No vendors yet" message with working "Add Vendor" button **If something's wrong:** Blank page or error

---

TEST-224: Requests page — no requests

What we're testing: Requests page empty state **Steps:**

1. With 0 requests, go to `/requests`

You should see: "No requests found" message. Tabs still visible and clickable **If something's wrong:** Blank list, or tabs don't work

---

TEST-225: Tenant my-requests — no requests

What we're testing: Tenant empty state **Steps:**

1. As tenant with 0 requests, go to `/my-requests`

You should see: "No requests yet" with a "Submit a Request" link that goes to `/submit` **If something's wrong:** Blank page or no link to submit

---

TEST-226: Property form — unit count boundary: 1

What we're testing: Minimum valid unit count **Steps:**

1. Open Add Property, set Unit Count = 1
2. Save

You should see: Property saves successfully with 1 unit **If something's wrong:** Rejected when it should be accepted

---

TEST-227: Property form — very long name

What we're testing: Long text doesn't break the layout **Steps:**

1. Open Add Property
2. Type a very long name (200+ characters)
3. Save and check the card

You should see: Property saves. The card handles the long name gracefully (truncates or wraps) **If something's wrong:** Name overflows and breaks the layout

---

TEST-228: Tenant form — valid email formats

What we're testing: Common email formats are accepted **Steps:**

1. Try saving a tenant with email "test@example.com" — should work
2. Try "user+tag@domain.co" — should work

You should see: Both email formats are accepted **If something's wrong:** Valid emails are rejected

---

TEST-229: Tenant form — invalid email format

What we're testing: Bad emails are caught **Steps:**

1. Try saving a tenant with email "not-an-email"

You should see: An error message about invalid email format **If something's wrong:** The invalid email is accepted

---

TEST-230: Tenant form — lease date logic

What we're testing: Lease dates make sense **Steps:**

1. Set Lease Start = today, Lease End = 1 year from today — should work
2. Set Lease Start after Lease End (backwards dates)

You should see: Normal dates are accepted. Backwards dates should show a warning or be rejected **If something's wrong:** Backwards dates are silently accepted

---

TEST-231: Vendor form — phone formatting

What we're testing: Phone numbers are handled flexibly **Steps:**

1. Enter "5551234567" (just digits)
2. Enter "(555) 123-4567" (formatted)
3. Save each

You should see: Both formats are accepted **If something's wrong:** One format is rejected

---

TEST-232: Submit form — very long description

What we're testing: Long text doesn't break submission **Steps:**

1. As tenant, type a very long issue description (2000+ characters)
2. Submit

You should see: The request is created successfully **If something's wrong:** Submission fails due to length, or text is silently truncated

---

TEST-233: Network offline — page behavior

What we're testing: The app handles lost internet gracefully **Steps:**

1. Open any page
2. Turn off your internet connection (airplane mode, or disconnect WiFi)
3. Try to navigate or interact

You should see: An error message or indication that you're offline — NOT a blank white screen **If something's wrong:** Blank white page, or the app pretends everything is fine

---

TEST-234: Slow network — loading states

What we're testing: The app shows progress on slow connections **Steps:**

1. In Chrome, open Developer Tools (F12), go to Network tab
2. Select "Slow 3G" from the throttle dropdown
3. Navigate to `/dashboard`

You should see: Loading spinners or skeleton placeholders while data loads. Page eventually renders **If something's wrong:** No loading indicators, infinite spinner, or the page never loads

---

TEST-235: Invalid request ID in URL

What we're testing: Bad URLs don't crash the app **Steps:**

1. Go to: https://web-lovat-sigma-36.vercel.app/requests/00000000-0000-0000-0000-000000000000

You should see: "Not found" message with working navigation **If something's wrong:** App crashes or shows a technical error

---

TEST-236: Expired/cleared session

What we're testing: Stale sessions redirect to sign-in **Steps:**

1. Sign in to the app
2. Clear your browser cookies (or wait for the session to expire)
3. Try to interact with the app

You should see: You're redirected to the sign-in page **If something's wrong:** You see an error page, or sensitive data is still visible

---

TEST-237: Double-click prevention on submit

What we're testing: Rapid clicking doesn't create duplicate requests **Steps:**

1. As tenant, fill in a request and rapidly click "Submit Request" twice

You should see: Only ONE request is created. The button disables after the first click **If something's wrong:** Two duplicate requests appear

---

TEST-238: Double-click prevention on dispatch

What we're testing: Rapid clicking doesn't dispatch twice **Steps:**

1. As landlord on a request detail, rapidly click "Approve & Dispatch" twice

You should see: Only one dispatch action occurs. Button disables after first click **If something's wrong:** Duplicate dispatch calls

---

TEST-239: Rapid page navigation

What we're testing: Quick page switching doesn't crash the app **Steps:**

1. Rapidly click through sidebar items: Dashboard → Requests → Properties → Vendors → Settings → Dashboard

You should see: No crashes, no errors, the final page renders correctly **If something's wrong:** App freezes, shows old data, or crashes

---

TEST-240: Delete property with tenants

What we're testing: Deleting a property cleans up associated tenants **Steps:**

1. Create a property and add 2 tenants to it
2. Delete the property

You should see: Property and both tenants are removed. No orphaned tenant records appear elsewhere **If something's wrong:** Property deletes but tenants remain without a property

---

TEST-241: Delete property with requests

What we're testing: Requests are handled when their property is deleted **Steps:**

1. Create a property, submit a request against it
2. Delete the property

You should see: The request is handled gracefully (removed or marked appropriately). No broken references on the requests page **If something's wrong:** Requests show with a missing/blank property name

---

TEST-242: Edit property — changes reflect elsewhere

What we're testing: Name changes propagate through the app **Steps:**

1. Edit a property's name
2. Check the dashboard property selector
3. Check the requests page

You should see: The new property name appears everywhere, not the old one **If something's wrong:** Old name appears on some pages

---

TEST-243: Delete vendor assigned to a request

What we're testing: The app handles missing vendors gracefully **Steps:**

1. Assign a vendor to a request (dispatch it)
2. Delete that vendor
3. View the dispatched request

You should see: The request detail handles the missing vendor gracefully (shows "Vendor removed" or similar, not a crash) **If something's wrong:** Request detail page crashes

---

TEST-244: Filters reset with no matching results

What we're testing: You can clear filters easily **Steps:**

1. On `/requests`, apply filters that match nothing
2. See "No requests found"
3. Clear all filters

You should see: The full request list returns **If something's wrong:** Filters get stuck and you can't see your requests

---

TEST-245: Very long vendor notes

What we're testing: Long text is handled on cards **Steps:**

1. Add a vendor with 500+ character notes

You should see: The vendor card shows a truncated preview of the notes (not the full text overflowing the card) **If something's wrong:** Card layout breaks due to long text

---

TEST-246: Dashboard load performance

What we're testing: The dashboard loads quickly **Steps:**

1. Navigate to the dashboard and time how long it takes to fully load

You should see: Full content visible within 3 seconds on a normal connection **If something's wrong:** Takes more than 5 seconds, or the page never fully loads

---

TEST-247: Properties page with many items

What we're testing: Performance with lots of properties **Steps:**

1. If you have 10+ properties, navigate to `/properties`

You should see: Page renders without lag. Scrolling is smooth **If something's wrong:** Page is slow to render, or scrolling is janky

---

TEST-248: Memory stability

What we're testing: The app doesn't slow down over time **Steps:**

1. Navigate between different pages 10+ times (Dashboard → Properties → Requests → Vendors → back, etc.)

You should see: The app remains responsive throughout **If something's wrong:** Each page load gets slower, or the app eventually freezes

---

TEST-249: Rent due day boundary values

What we're testing: Rent due day accepts valid day numbers **Steps:**

1. Add a tenant with rent due day = 1 (first of month)
2. Edit to rent due day = 31 (last of month)

You should see: Both values are accepted **If something's wrong:** Valid day numbers are rejected

---

TEST-250: Custom field with special characters

What we're testing: Special characters in custom fields don't break anything **Steps:**

1. Add a tenant or vendor with custom field: Key = "Notes/Comments", Value = "Has a dog & cat <3"

You should see: The field saves and displays correctly, including special characters **If something's wrong:** Characters are escaped weirdly, or the save fails

---

TEST-251: Photo drag-and-drop on submit

What we're testing: Drag-and-drop photo upload works **Steps:**

1. As tenant on `/submit`, drag a photo from your desktop onto the upload area

You should see: The photo is accepted and a preview appears **If something's wrong:** Nothing happens on drop, or you get an error

---

TEST-252: Multiple photo upload

What we're testing: You can attach multiple photos at once **Steps:**

1. On the submit page, select 3 photos at once (hold Ctrl/Cmd while clicking)

You should see: All 3 photos show previews **If something's wrong:** Only 1 photo uploads, or the app crashes

---

Section 13: Cross-Browser & Accessibility

TEST-253: Chrome — full functionality

What we're testing: Everything works in Chrome **Steps:**

1. Open the app in the latest Chrome
2. Navigate through: sign-in, dashboard, properties, vendors, requests

You should see: Everything renders correctly and all interactions work **If something's wrong:** Any feature is broken in Chrome

---

TEST-254: Firefox — full functionality

What we're testing: Everything works in Firefox **Steps:**

1. Open the app in the latest Firefox
2. Navigate through main pages and test a form submission

You should see: Everything renders correctly, forms submit properly, no layout differences **If something's wrong:** Layout looks different, or features don't work

---

TEST-255: Safari — full functionality

What we're testing: Everything works in Safari **Steps:**

1. If you have access to Safari, open the app
2. Test main flows including date inputs (Safari has a different date picker)

You should see: Everything works correctly **If something's wrong:** Date fields don't work, or layout issues appear

---

TEST-256: Mobile Chrome (Android)

What we're testing: Touch interactions work on Android **Steps:**

1. Open the app on an Android phone in Chrome
2. Test: tap navigation, fill a form, scroll lists

You should see: Touch interactions are responsive, bottom nav works, forms usable with on-screen keyboard **If something's wrong:** Taps don't register, or the keyboard covers input fields

---

TEST-257: Mobile Safari (iOS)

What we're testing: The app works on iPhones **Steps:**

1. Open the app on an iPhone in Safari
2. Test main flows

You should see: No viewport issues, forms work with iOS keyboard, everything renders correctly **If something's wrong:** Pages zoom in unexpectedly, or forms don't work

---

TEST-258: Keyboard navigation — Tab key

What we're testing: You can navigate without a mouse **Steps:**

1. On any page, press Tab repeatedly

You should see: Focus moves through each interactive element (buttons, links, form fields) in a logical order. Each focused element has a visible outline/ring **If something's wrong:** Focus jumps randomly, or you can't see where focus is

---

TEST-259: Keyboard — Enter activates buttons

What we're testing: Keyboard-only interaction works **Steps:**

1. Tab to a button
2. Press Enter

You should see: The button activates (same as clicking it) **If something's wrong:** Nothing happens on Enter

---

TEST-260: Keyboard — Escape closes modals

What we're testing: Escape key is universally supported **Steps:**

1. Open a form sheet or dialog
2. Press Escape

You should see: The sheet/dialog closes **If something's wrong:** Escape doesn't close it

---

TEST-261: Form field labels

What we're testing: Screen readers can identify form fields **Steps:**

1. Open any form (Add Property, Add Vendor, etc.)
2. Click inside each field

You should see: Each field has a visible label above or near it. Clicking the label moves focus to the field **If something's wrong:** Fields have no labels, or labels don't focus the field

---

TEST-262: Button accessible names

What we're testing: Buttons are descriptive **Steps:**

1. Look at all buttons on a page

You should see: Every button has readable text or an icon with a tooltip. No blank/unnamed buttons **If something's wrong:** Buttons with only icons and no tooltip or label

---

TEST-263: Image alt text

What we're testing: Photos have descriptions for accessibility **Steps:**

1. On a request detail with photos, hover over the photos

You should see: Photos have alt text (you can check in browser inspector, or hover to see a tooltip) **If something's wrong:** Photos have empty alt text or no alt attribute

---

TEST-264: Color contrast — text readability

What we're testing: Text is easy to read **Steps:**

1. Browse through all pages

You should see: All text is clearly readable against its background. Light gray text on white is a common issue to look for **If something's wrong:** You have to squint or lean in to read text

---

TEST-265: Information not only via color

What we're testing: Colorblind users can still understand the UI **Steps:**

1. Look at urgency badges and lease status badges

You should see: In addition to color, badges also have text labels (like "Emergency", "Active", "Expired") **If something's wrong:** Urgency is conveyed only by color with no text label

---

Bugs Found

Record any bugs here during testing. Include as much detail as possible!

Bug #	Test Case	What Happened	What Should Have Happened	Screenshot	Severity
1					
2					
3					
4					
5					
6					
7					
8					
9					
10					

Severity Guide:

- **Blocker** — The feature doesn't work at all, blocks other testing
- **Major** — The feature mostly works but has a significant problem
- **Minor** — Small issue that doesn't block usage (cosmetic, typo, alignment)
- **Cosmetic** — Purely visual, doesn't affect functionality

Testing Complete!

Thank you for testing Liz! Your work helps us build a better product for landlords and tenants.

Total test cases: 265 **Estimated time:** ~2.5–3 hours for a full pass

When you're done, save this file with your results and share it with the team.

Appendix: Production Screenshots

Screenshots captured from `https://web-lovat-sigma-36.vercel.app` on April 8, 2026.
